CO ₂ Incubator	80

Gravity Incubator -Feature

Incubator is a basic piece lab equipment suitable for stagnant incubation and storage of tests requiring a specific range of temperatures for a specific period of time. In accordance to this, our Incubators can maintain a uniform range of temperatures for a certain set period.

• Accessory

-Movable Epoxy Coated Wire Shelves 2EA

• Safety Device

-Automatic reset function incoming power cut
-Electric leakage breaker
-Over temp function

Refrigerated Incubator -Feature

This version of incubator comes with a high-powered refrigeration compressor. Its cooling temperatures ranges from -5°C to 60°C. It is designed to conduct separated tests in high or low temperature. It is also capable of minimizing adjustment period from low to high or vice versa.

• Accessory

-Movable Epoxy Coated Wire Shelves 2EA

• Option

-Programmable controller
-Digital recorder
-2CH Hybrid recorder
-RS-485 interface
-RS-232C interface

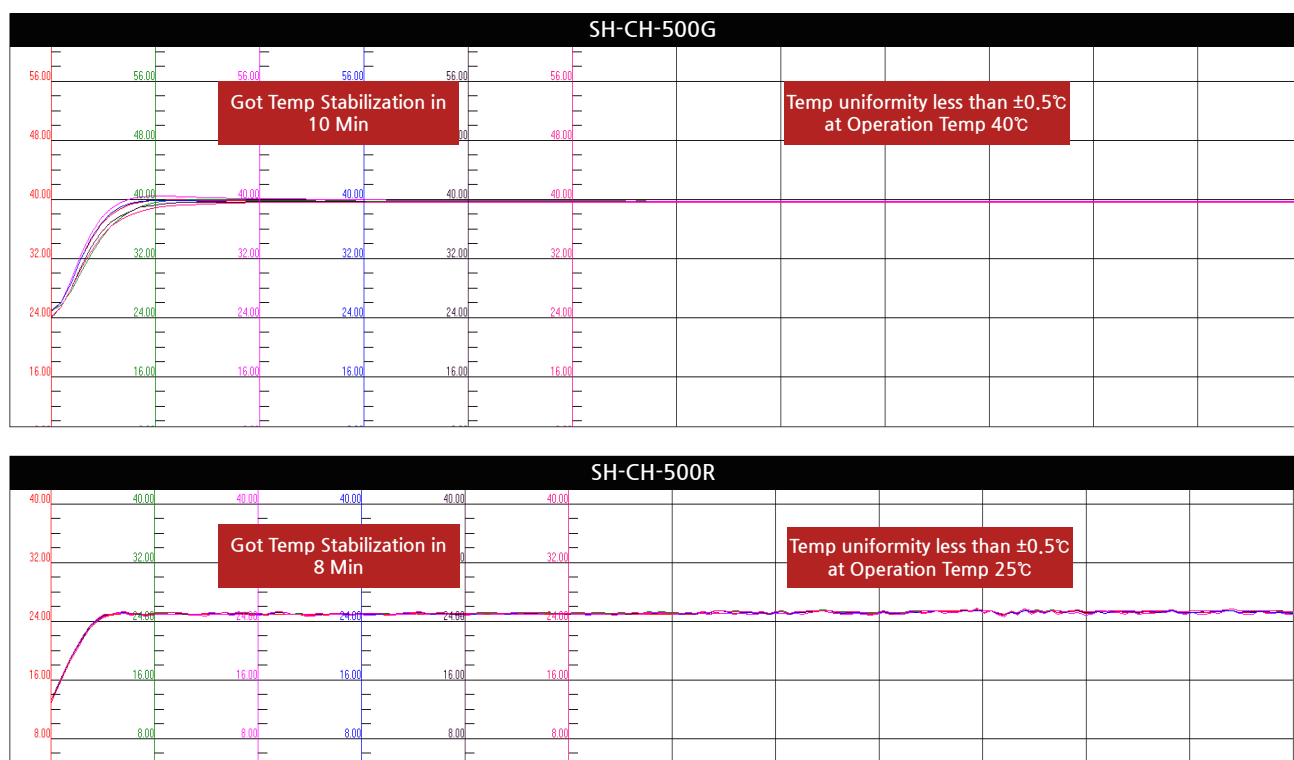

• Safety Device

-Automatic reset function incoming power cut
-Buzzer on when set time arrived
-Door open alarm
-Electric leakage breaker
-Over temp controller
-Refrigerator over load protection

4-Chamber Incubator -Feature

For efficient space usage and increased productivity level, we provide a 4-room chamber model that can be controlled independently. The user can set four different temperatures into these four different compartments and have independent processes inside each of these four chambers at the same time.

Cold Lab Chamber -Feature

Cold lab chamber is a lab equipment which is necessary when keeping reagent or testing sample in a low temperature.

SH Scientific's cold lab chamber supports temperature from 0°C to 10°C and provides sophisticated and stable temperature control performed by heater controlling method.

CO₂ Incubator

<CI-191C>

CO₂ incubator is a key equipment for immunology, oncology genetics and bioengineering. It provides a reliable microprocessor controller to ensure the accuracy and uniformity of temperature and CO₂ concentration. Advanced sterilization technology has been applied to keep the experiment from being polluted.

Feature

- Dual Wave length NDIR provides the precise and reliable CO₂ detection.

NDIR CO₂(Dual Wavelength Type) Sensor

A Non-dispersive infrared sensor is used in gas analysis to determine the gas concentration. It is particularly used for the feature that gas molecules in asymmetry or more than 3 atomic structures absorb their own energy selectively. With Dual Wavelength detectors(Reference, Absorption), it provides the precise CO₂ detection and stable durability.

- Stackable units to save space.

- Temperature control on the door prevents condensation.

- Audible and visual alarm at over limit status.

- HEPA air filtration provides class 100 air purification.

- Inner Glass Door Sensor

- Out Door Glass Door Sensor

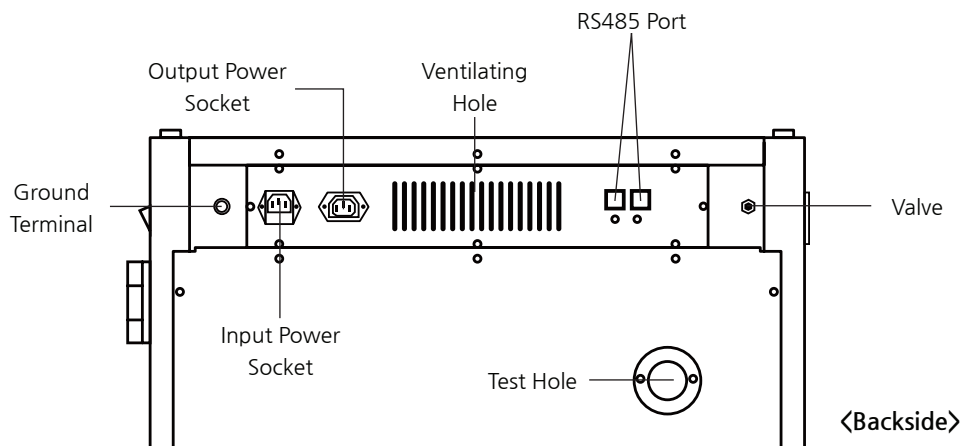

Sample Hole

Leveling Foot

Tray

- Perfect leakage prevention by Inner glass door handle and Sealing Gasket.
- Mirror grade stainless steel chamber with round corner for easy clean up.
